

Graded Quiz: Server Objects and Hierarchy

1. Which of the following schemas is the default schema?

1 / 1 point

- ☐ System schema
- ☒ User schema
- ☐ Object schema
- ☐ Partition schema

✓ **Correct**

Correct. The default schema is the user schema for the user who is currently logged on.

2. Which of the following is one of the four MYSQL system databases?

1 / 1 point

- ☐ Read-only table
- ☐ Catalog
- ☐ Database 1
- ☒ Sys

✓ **Correct**

3. Some RDBMSs provide storage groups that let you organize data and storage based on data groups called Hot data, Warm data, and Cold data. Which temperature contains data that is accessed least frequently?

1 / 1 point

- ☐ Hot data
- ☒ Cold data
- ☐ Warm data
- ☐ Variable data

✓ **Correct**

Correct. Cold data is accessed less than Hot or Warm data.

4. Which of the following describes the relationship between containers and tablespaces?

1 / 1 point

- ☐ Containers store multiple Tablespaces
- ☐ Tablespaces hold empty space inside containers
- ☐ Tablespaces store containers
- ☒ One or more containers store each tablespace

✓ **Correct**

Correct. Tablespaces are structures containing database objects and one or more Containers store each Tablespace.

5. Database partitions store subsets of data from very large databases. Which of the following is true?

1 / 1 point

- ☐ Tables cannot be partitioned into multiple logical partitions.
- ☒ A relational database whose data is managed across multiple partitions is called a partitioned relational database.
- ☐ Partitioning is used when little data is available.
- ☐ Each partition contains a copy of the entire set of data.

Correct

Correct. "Partitioned relational database" is the name for this type of database.
