## **Graded Quiz: Basic SQL**

| 1. | Ass                 | sume an INSTRUCTOR table exists with columns including FIRSTNAME, LASTNAME, and others. What would be the most likely result set for the query:  | 1/1 point |
|----|---------------------|--|-----------|
|    | SEL                 | LECT DISTINCT FIRSTNAME FROM INSTRUCTOR  |           |
|    | 0                   | LEON   |           |
|    |                     | LEON   |           |
|    |                     | PAUL   |           |
|    |                     | PAUL   |           |
|    | 0                   | LEON KATSNELSON  |           |
|    |                     | PAUL ZIKOPOLOUS  |           |
|    |                     | JOE SANTARCANGELO  |           |
|    | •                   | LEON   |           |
|    |                     | PAUL   |           |
|    |                     | JOE  |           |
|    |                     |  |           |
|    | 0                   | LEON   |           |
|    |                     | PAUL   |           |
|    |                     | LEON   |           |
|    |                     | JOE  |           |
|    | 0                   | Correct  Correct! The DISTINCT keyword is used to return only distinct or different rows.  |           |
|    |                     | Correct: The DISTINCT Reyword is used to return only distinct of different rows.   |           |
|    |                     |  |           |
| 2. | UPD                 | DATE INSTRUCTOR SET LASTNAME = 'Brewster' WHERE LASTNAME = 'Smith'   | 1/1 point |
|    | 0                   | Updates all rows in the table to have the last name 'Smith.'   |           |
|    | <ul><li>•</li></ul> | Changes the last name of all instructors named 'Smith' to 'Brewster.'  |           |
|    | 0                   | Updates all rows in the table to have the last name 'Brewster.'  |           |
|    | 0                   | Changes the last name of the instructor named 'Brewster' to 'Smith.'   |           |
|    | 0                   | Correct  Correct! This statement updates the last name of all instructors named 'Smith' to 'Brewster.'   |           |
|    |                     | corect. This statement appeares the last name of all historicons named. Similar to brewster.   |           |
|    |                     |  |           |
|    | What                | would occur if you executed a DELETE FROM statement on a table without the WHERE clause?   | 1/1 point |
| (  | ) T                 | The command would delete the table from the database.  |           |
| (  | O 1                 | The command would result in an error.  |           |
| (  | _                   | The command would only delete the first entry in the table.  |           |
|    | T                   | The command would remove all entries in the table, leaving it empty but still present in the database.   |           |
|    | $\odot$             | Correct! Without the WHERE clause, the DELETE statement removes all entries from a table, leaving it empty in the database.  |           |
|    |                     | The classes are deleted and the control of the cont |           |

Graded Quiz: Basic SQL

| 4. | What is the expected result of the following SQL statement?   | 1/1 point |
|----|---|-----------|
|    | SELECT COUNT(DISTINCT FIRSTNAME) FROM INSTRUCTOR  |           |
|    | The statement would throw an error.   |           |
|    | The count of unique entries along with the distinct FIRSTNAME entries.  |           |
|    | Only the distinct FIRSTNAME entries.  |           |
|    | The number of unique FIRSTNAME entries in the INSTRUCTOR table.   |           |
|    | <ul> <li>Correct</li> <li>Correct! The DISTINCT keyword identifies unique entries, and COUNT returns the number of these distinct entries.</li> </ul>           |           |
| 5  | Considering the execution of the following SQL statement, what would be the expected output?  | 1/1 point |
|    | SELECT * FROM INSTRUCTOR WHERE LASTNAME='Smith' LIMIT 5   | 1/1 point |
|    |   |           |
|    | The first 5 rows from the INSTRUCTOR table.   |           |
|    | The last 5 rows from the INSTRUCTOR table.  |           |
|    | The last 5 entries in the INSTRUCTOR table where LASTNAME is 'Smith.'   |           |
|    | The first 5 entries in the INSTRUCTOR table where LASTNAME is 'Smith.'  |           |
|    | ○ Correct     ○ Correct     ○ Correct The WHERE clause filters the results based on the LASTNAME and the LIMIT clause restricts the output to the first 5 rows. |           |
